KS3 Unit 9 ICT - Developing Ideas to Publish on the web

To develop childrens ideas they can look at any of the web pages designed on this site.

Then after half a lesson, they need to begin web publishing using Dreamweaver or Frontpage.

This is an "end result" resource.

Target age range: 12 , year 8

The resource was found by browsing the [supergrid](#)

Ease of Use :

The web site itself is an interactive page full of links to completed web pages. It is easy to use.

Content :

The content is varied and random. The browsers need to have a clear idea of why they are browsing this site.

It is not specifically for the KS3 Unit 9 ICT resource but will motivate children into developing ideas they can share.

This link only forms a part of this Scheme of Work.

The authors come from a media company. One can register on this site, and also submit sites. The site is reasonably safe, I tried to search for various sites of a distateful nature, and did not succeed.

However, it does not cover the 7hr programme fully (see [standards](#) site).

Design Presentation :

The friendly cat helps give this a childs feel to the site.

There are no Instructions on how to create any of the pages so online tutorials and the teacher need to focus on this element.

There are many completed examples of the resulting work required, so the less imaginative may be assisted greatly here.

Interactive features :

Medium interaction in the web pages eg links.

Utility : I would find this site useful and would recommend it others.

Marks : 5 / 10
