

**Evaluation of**  
“[Supermarket](#)” by TRE  
Evaluator: George Dong & Agnes Annan

**Summary:**

This title is a project for students to make decisions on where a new supermarket should be located. It is interactive and requires many basic skills which students have learnt. It is a good project. We'd adapt it for ICT lessons with more emphasis on presentation rather than decision making, considering it is intended for geography lesson activity.

**Ease of access**

It is extremely easy to access and download in Word .doc format.

**Content and Curriculum Relevance**

This title is a good resource for Unit 12 “Integrating applications for solutions.” It is also suitable for Exchanging and Sharing Ideas strand of IT NC.

To complete this task, the skills required are of a very wide range including word processing, image processing, DTP, spreadsheet and web publishing, plus map reading skills. The non-appearance of Database is a good sign as student can learn to decide “it is not needed, then don't use it.” The down side is student does not have the chance to practice it in this project.

It is a real life situation and students can use their skills to solve a real problem. Which should be motivating as well as learning and reviewing.

A good one.

**Overall 10 out 10**
