

Evaluation of
“Logo with Microworlds Pro” by Elizabeth Doyle

Evaluator: George Dong
IT PGCE work 1

Summary:

This title mainly consists of a student booklet about the basics of using Logo. It is an extremely useful resource for teaching KS3 students. I would use it myself and recommend it to others as well.

Ease of access

It is extremely easy to access and download in Word .doc format.

Content and Curriculum Relevance

This title supports the Unit 13 of KS3 scheme of work “Control systems “ and particularly relevant to the strand of “Developing ideas and Making things to happen” of IT NC.

From the basic entry-level operation commands to complex procedures and using variables, the title gives logic and easy to follow stages for students to learn, to practice and to test themselves.

The two self-tests are very good concepts.

The only concern I have is how many teaching hours this title is intended for? But in any case, it is a very condensed version of several books and enhanced the teaching efficiency greatly.

Overall 10 out 10
